

Installation Instructions: Steering Column Pods

Models #10006, #10007, and #20023 (double sided tape and ratchet fasteners)

STEP ONE: Determine how gauge wiring will be run:

- A. Some pod models have a tunnel (mouse hole) for wiring.
- B. Others will require you to create an opening in the stock steering cover for wiring to pass through (Porsche/Boxster).

STEP TWO: Cut studs off gauge close to housing. Insert gauge in pod (press fit).

STEP THREE: Install/Wire gauge using instructions that came with each gauge.

STEP FOUR: Install Pod on top of steering column.

- A. To use transfer tape - tape should be placed on sides of column, NOT on the top.
- B. To use ratchet fasteners - place steering pod in desired mounting location. Drill a 3/16" hole through the steering pod and OEM column on both the left and right side.
Press in ratchet fasteners.
